

# HGT-100 & 200

## notching details

### HGT-100 - hydraulic patch fitting

glass notching options for standard clearances under door

unit : mm

There are two different glass cut outs for the HGT-100, resulting in different bottom clearances. You can opt for the reduced clearance gap if the floor condition is good and level.

GCC would recommend the customer cuts **60mm** depth (bottom gap 12mm) to allow for most floor condition.

### HGT-200 - top patch fitting

glass notching options for standard clearances over door
