

Helaslide 150

Helaslide 150 is one of our next generation sliding door systems that gives designers and installers maximum flexibility. Helaslide 150 can be used for every conceivable application both internal or external for doors upto 150kg due to its 20 micron track, 316L components and a Softclose unit that will accommodate the full 150kg capacity. This combined with Low Headroom capability (100kg max) and a forthcoming Synchro system that will be hidden within the track makes this system perfect for most, if not all projects. Wall mounted floor guides are also available. Standard kits are available but we can make bespoke variants as well.
